Focus on Creating High-Quality Content, Not Storing It

Your audience's demand for high-quality, rich-media content is increasing every day. So how do you make sure you have enough fail-proof storage to support those demands without the inconvenience and cost of managing it yourself? The answer is Level 3 Origin Storage service. It's the scalable, reliable and affordable way to store your content library as it grows. With our Origin Storage service, you can focus on what you do best — creating new content and driving your online revenue.

Hassle-Free Storage with High-Speed Delivery

Our Origin Storage service works with the Level 3[®] Caching and Download service or Level 3SM Streaming service to offer you all of these important benefits:

Flexibility and Scalability – You can start with modest storage requirements and scale up as quickly as you need. We have over 1 PB of Origin Storage capacity deployed globally, so you can be sure we'll have what you need, when you need it — and, you only pay for what you use.

Security and Reliability – Mirroring, RAID, geographic diversity and the latest firewall technology are all employed to make your content assets safe, secure, redundantly stored and ready for delivery. And, it's confidently backed by a 100 percent service level agreement.*

Ease of Management – We offer several standard methods for managing content, and will work with you if your company has its own digital asset management (DAM) system or needs access to an application programming interface (API). If you maintain your own origin storage, our service can also reduce or eliminate hits on your system.

Global Reach & Speed – Our worldwide storage locations are directly and redundantly connected to our Tier 1 global IP network. This minimizes the distance your data travels and increases the speed, quality and reliability of content delivery.

Cost Savings – Our economies of scale make it cost effective for you to store small or large content libraries, and it's dramatically less expensive than expanding your own infrastructure.

* See service agreement for complete details and SLAs.

How It Works

- You upload content to a single Level 3 Origin Storage super node in your region.
- Your content is automatically replicated and then distributed to our worldwide CDN.
- When an end user types in your web address, the request is redirected and transparently served to them from Level 3's closest cache server.
- Records and reports of activity can be accessed for billing your customers or to monitor content usage activities.
- You only pay for the storage you use, and you can add more whenever you need it.

How We Safeguard Your Assets

We know there is nothing more important than keeping your online assets secure. Here are some of the key features of the Origin Storage service that are designed to help keep your content protected:

- Level 3 Origin Storage super nodes are redundantly connected to our global IP network with 10 Gig Ethernet connectivity.
- Content is mirrored in multiple cities within each region.
- Data is protected with RAID, dual power supplies, dual NICs and spare disks drives.
- Spare servers are placed in each rack in case of server failure or fire damage.
- Hardened, high-availability hardware is used for all management and metadata controller machines.

Level 3 stores over 600 PB of content for over 200 customers worldwide.
